
DHD STUDIO
Your digital actor.
Your personal AI studio.
Create your digital version
and turn it into the foundation for
continuous video content production.
DHD STUDIO BY ALGORITHM

Your business shouldn't depend on whether you had time to shoot a video today.

Ideas. Scripts. Shoots.
Reshoots. Editing. Publishing.

Creating regular content
takes time, discipline,
and a constant presence
in front of the camera.

You built a business,
not an endless production process.

Imagine that instead of the one on camera is your digital actor.

With your appearance. With your voice.
In your subject area.

While you focus on your business,
your AI studio prepares new
video content.

Your presence on screen no longer
requires constant filming.

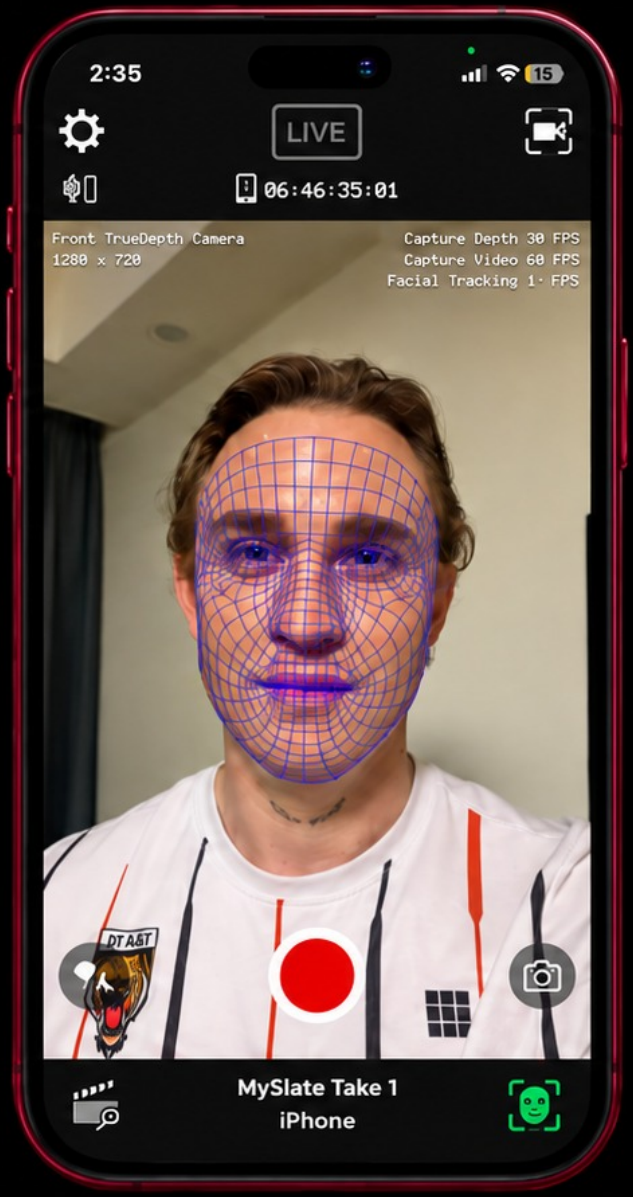

Not a filter.
Not a mask.
Not a one-time generation.

DHD Studio is a technology for creating
a permanent digital actor
based on your appearance and voice.

The character is preserved and can be
used in new scenes, videos, and projects
without being rebuilt from scratch.

One digital actor.
Endless possibilities.

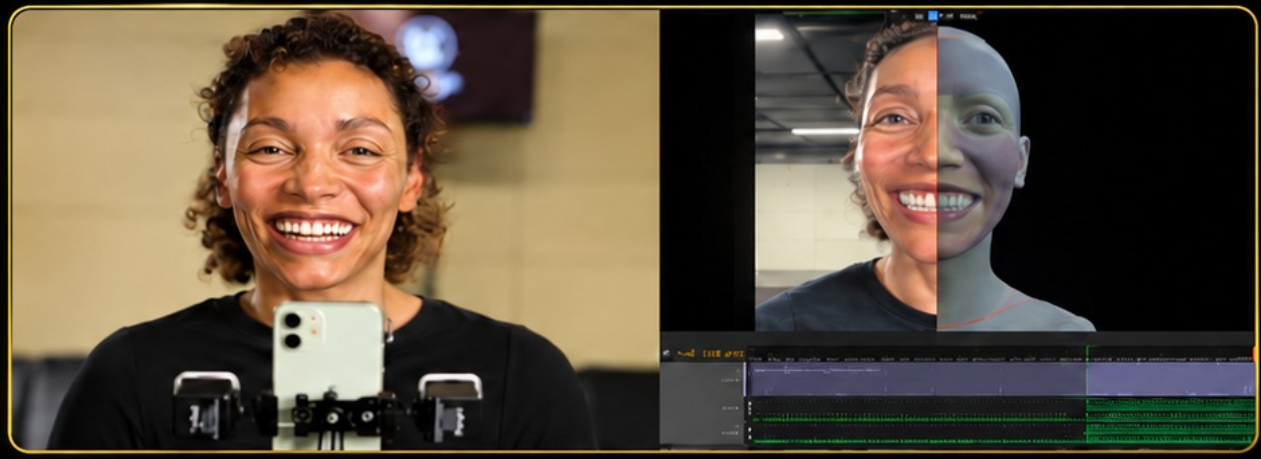

DHD STUDIO

It all starts with a few short videos.

Upload footage of your face, speech, emotions, and movements.

No professional film studio. Just you, a smartphone, and simple step-by-step instructions.

Provide the materials once, and the creation of your digital actor begins.

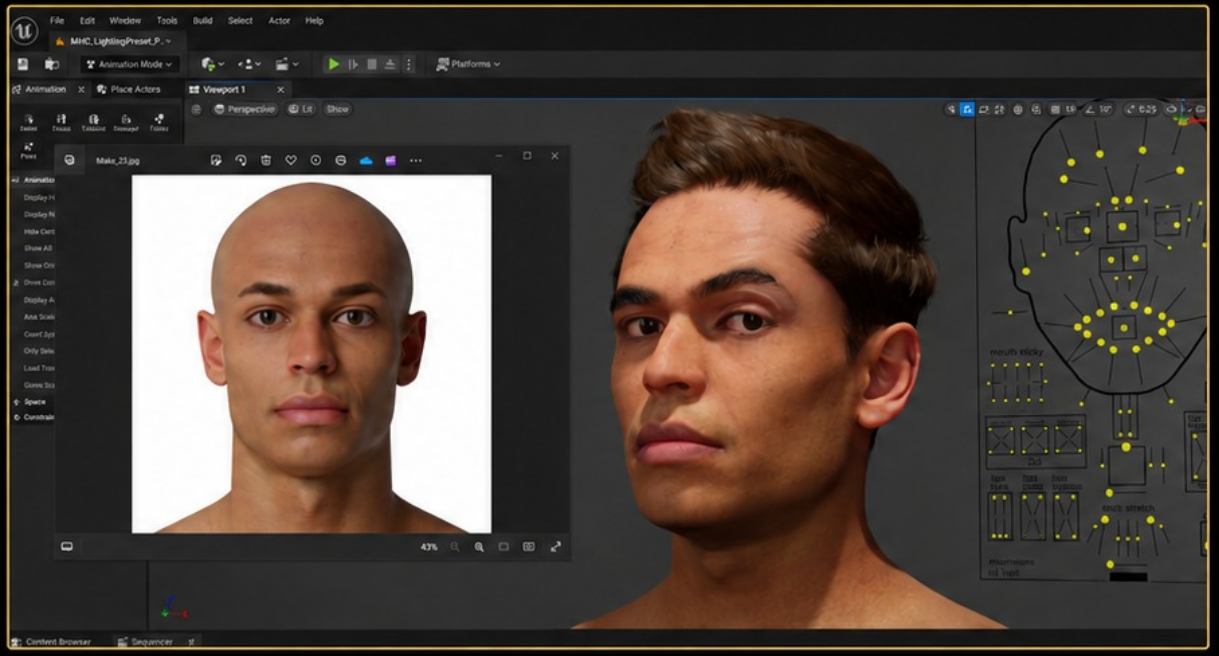

Actual DHD development stage

Five simple steps to create your digital version.

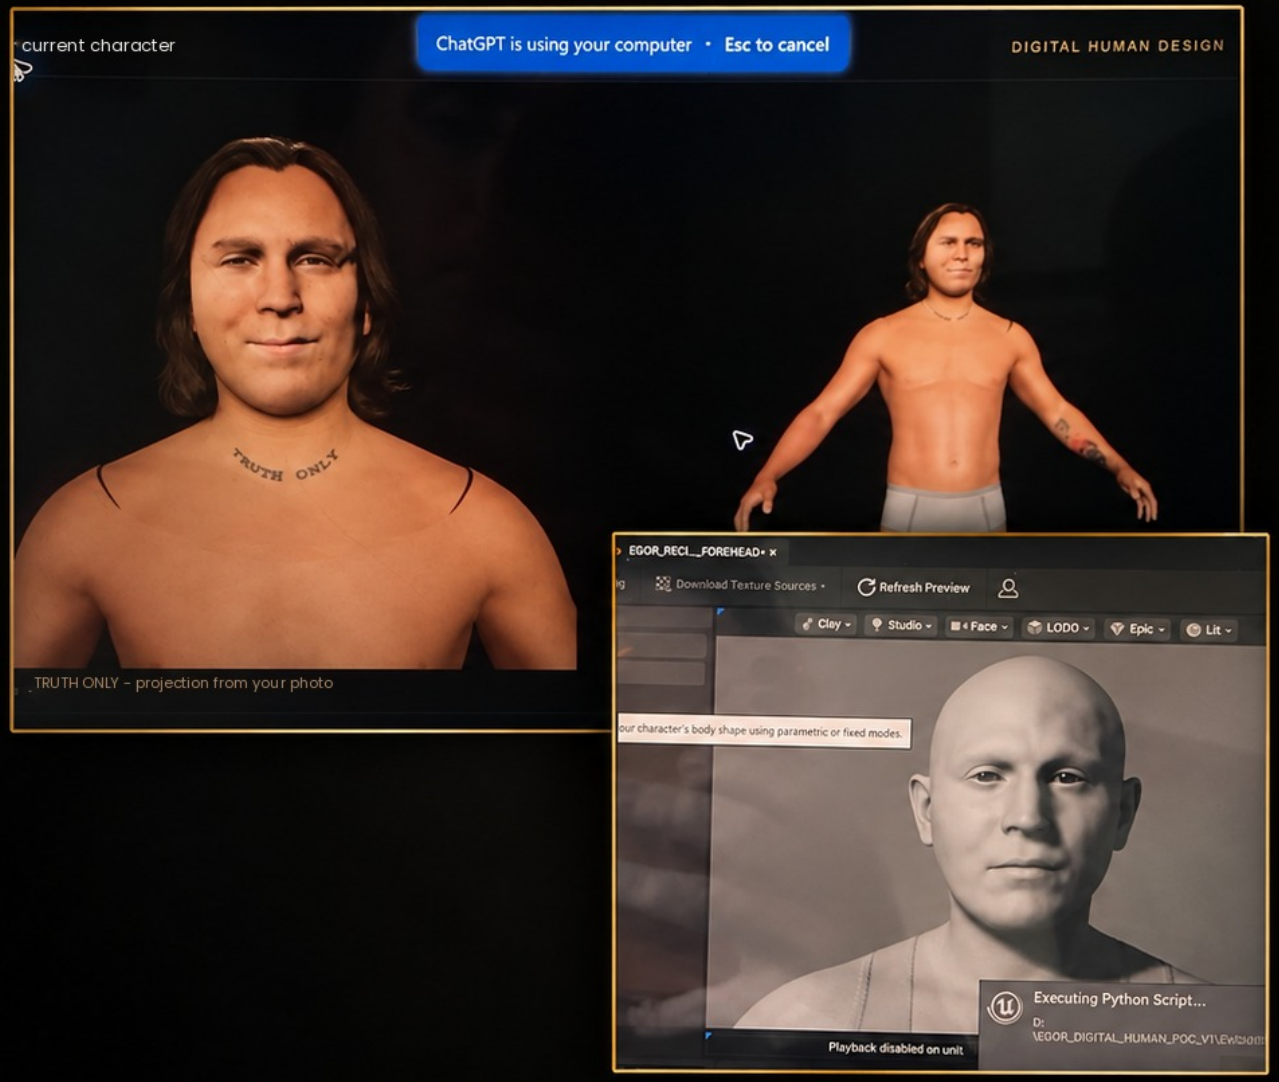

1. **Face:** front view, head turns, different angles.
2. **Voice:** natural speech and intonation.
3. **Expressions:** smile, emotions, articulation.
4. **Build:** height, proportions, and posture.
5. **Movement:** signature gestures and body language.

Additionally: tattoos, distinctive features, and individual requests.

Your hairstyle is recreated from the source materials; clothing and accessories are chosen from the prepared DHD library.

Face | Voice | Emotions | Body | Gestures

Development snapshots: EGOR Digital Human

DHD STUDIO

Your source materials become a digital actor.

We recreate facial features, eye color, skin texture, hair, voice, and individual characteristics.

A personal digital master character is created and saved for future use.

Your digital actor becomes the permanent foundation of future video projects.

Realism starts with the details.

Eye shape. Skin texture. Eyebrows. Expressions. Facial asymmetry. Individual traits.

We strive to preserve a person's recognizability not only in a still image, but also during speech and movement.

It's not enough to create a similar face.
What matters is preserving your individuality.

One actor.
Many looks.

DHD Studio includes its own curated library of clothing and accessories.

A business suit for an expert talk. A casual look for a personal blog. A signature style for a commercial.

You choose the clothing and accessories to fit your goals.

Your hairstyle and distinctive features are recreated individually.

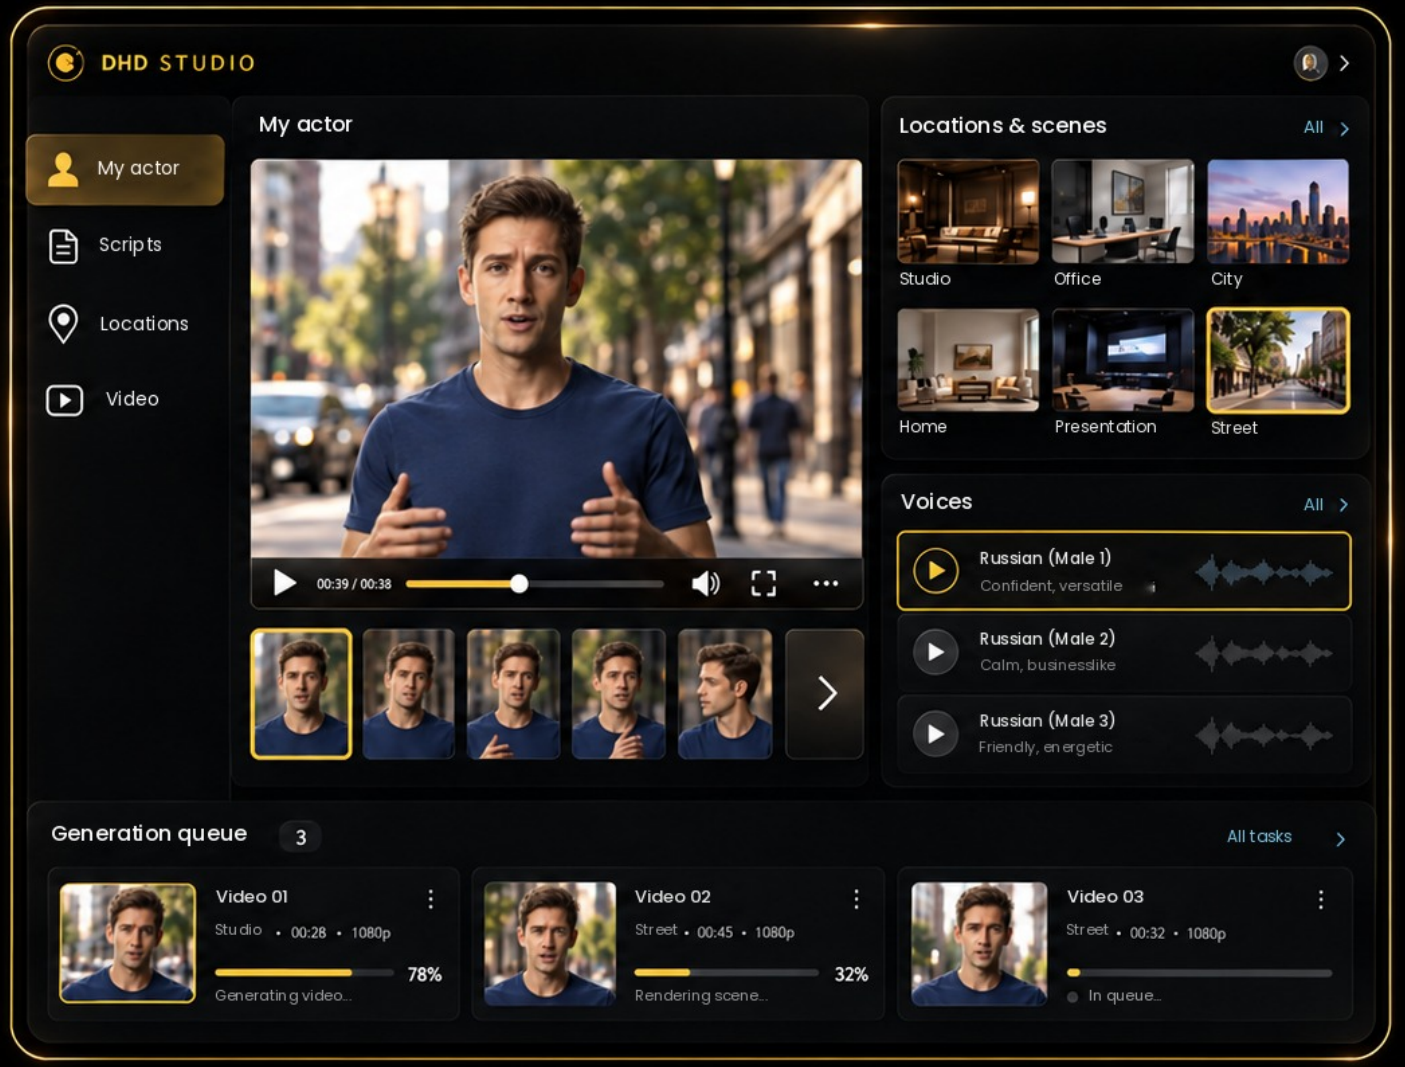

DHD STUDIO

Welcome to your personal DHD Studio.

Your digital actor, scripts, voices, looks, scenes, and finished videos, all in one unified workspace.

You choose the content direction, edit tasks, approve scripts, and manage video production.

Everything your digital media studio needs, in one interface.

DHD STUDIO

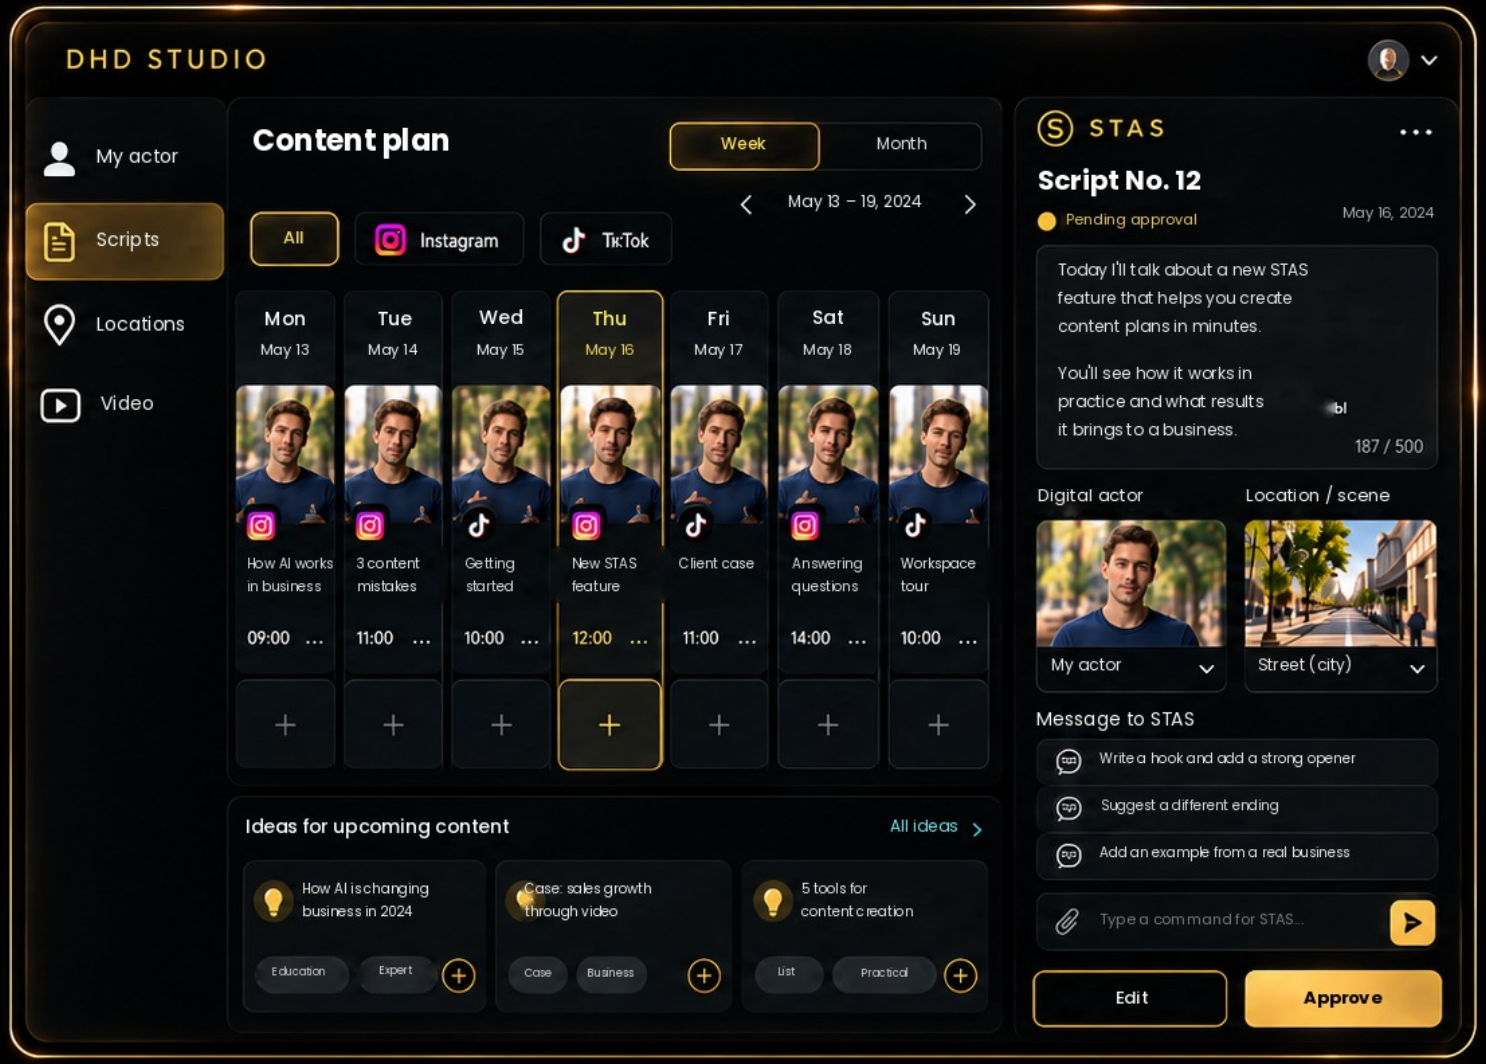

— STAS AI DIRECTOR

Your personal AI director prepares your next content plan.

STAS helps find topics, create scripts, and choose delivery style, locations, angles, and digital actor movements.

All suggestions can be reviewed, edited, and approved.

You decide what to say. STAS organizes how to turn it into video.

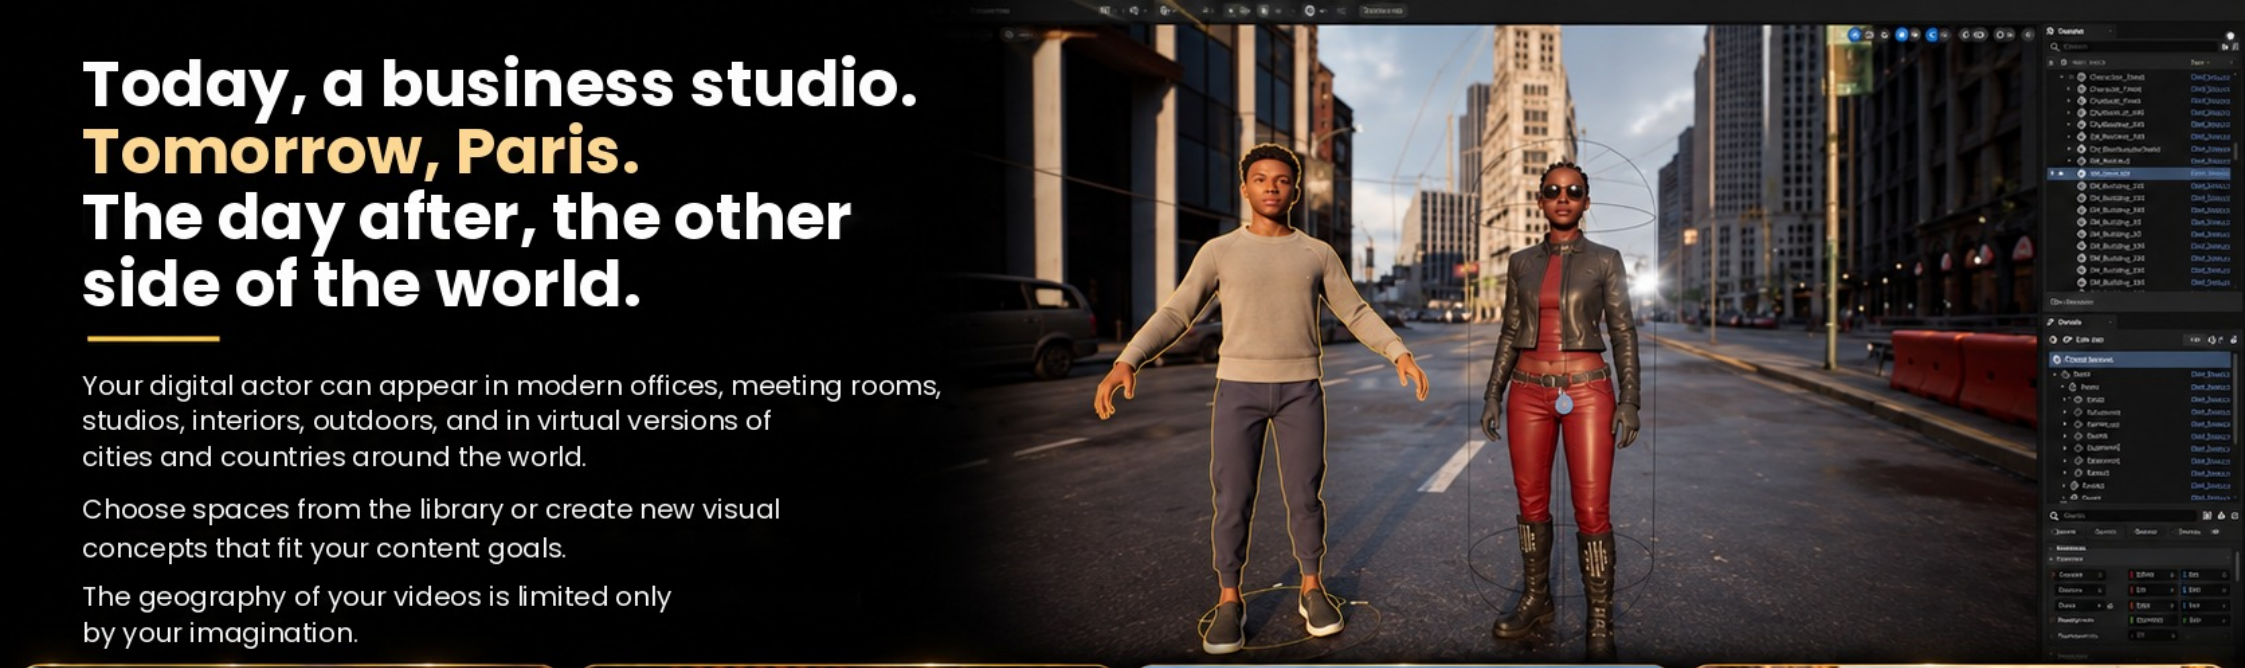

Today, a business studio. Tomorrow, Paris. The day after, the other side of the world.

Your digital actor can appear in modern offices, meeting rooms, studios, interiors, outdoors, and in virtual versions of cities and countries around the world.

Choose spaces from the library or create new visual concepts that fit your content goals.

The geography of your videos is limited only by your imagination.

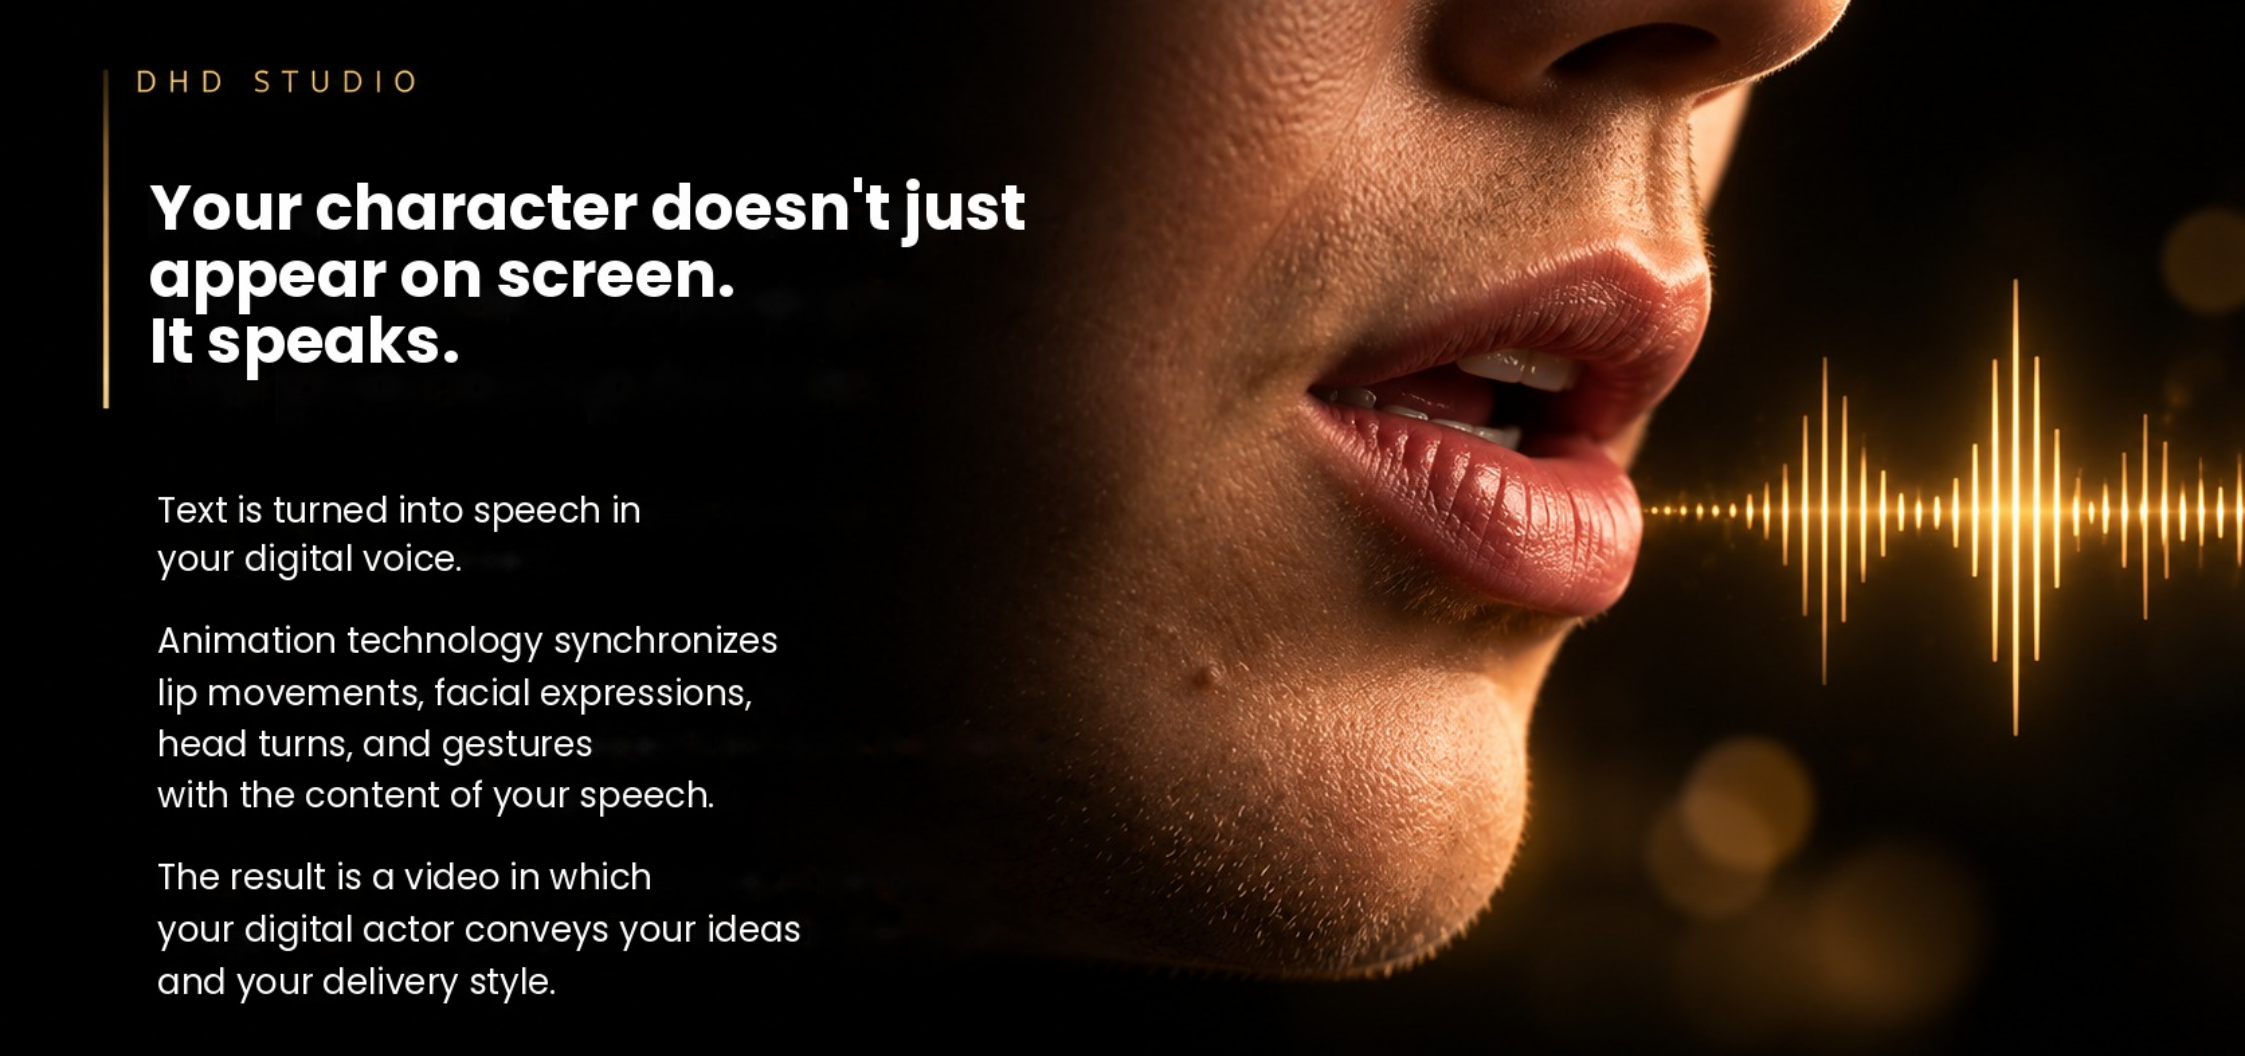

DHD STUDIO

Your character doesn't just appear on screen. It speaks.

Text is turned into speech in your digital voice.

Animation technology synchronizes lip movements, facial expressions, head turns, and gestures with the content of your speech.

The result is a video in which your digital actor conveys your ideas and your delivery style.

TEXT → VOICE → EXPRESSION → ANIMATION → VIDEO

— DHD STUDIO

From one digital actor to full-scale video production.

50

UP TO 50 VIDEOS PER DAY

Each video up to 60 seconds long.

DHD Studio is designed for automated video production with your digital actor: different topics, scripts, looks, and locations.

Your subscription also includes the multiplatform ALGORITHM package for planning and publishing content on supported social networks.

> Up to 50 videos per day is the plan's target capacity.
> Actual publications depend on the limits of connected platforms.

ALGORITHM AGENT

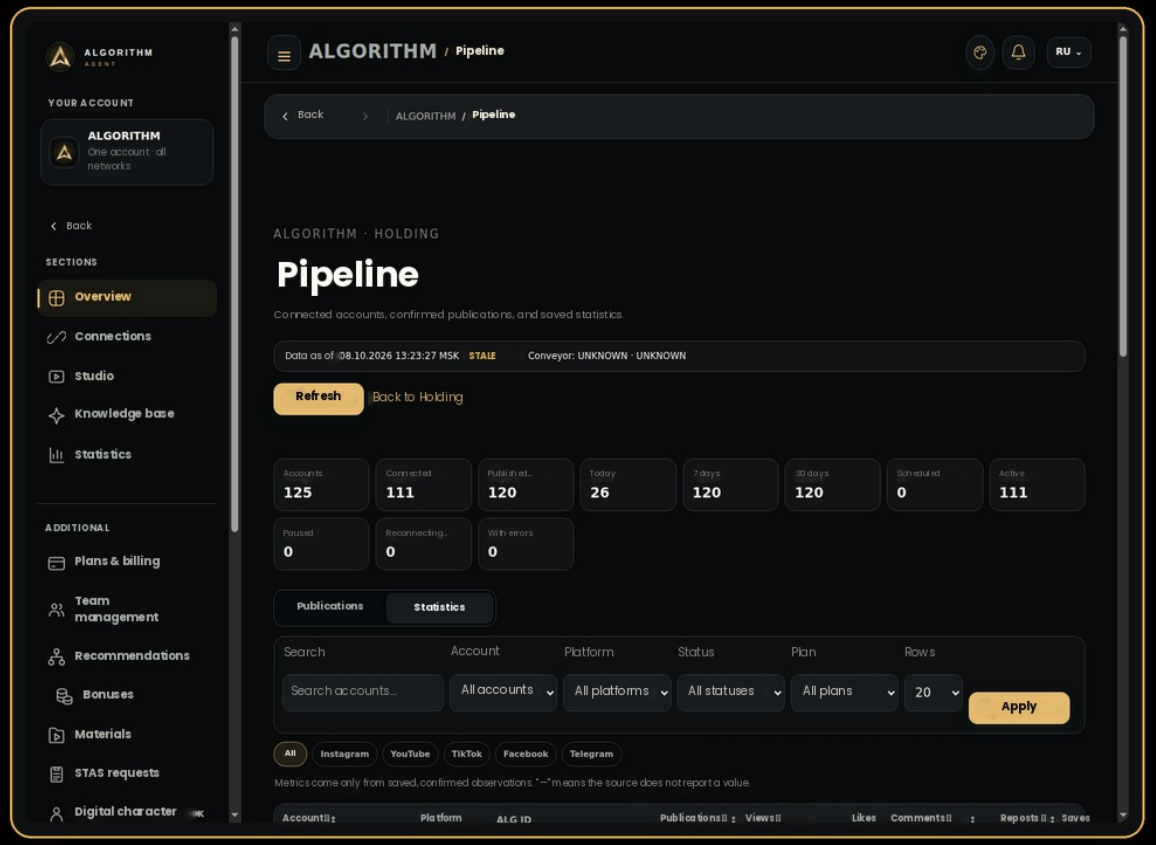

Not just creating a video. Taking it all the way to publishing.

Your DHD Studio works in a single ecosystem with ALGORITHM AGENT.

Scripts, production, approvals, publishing schedules, and management of connected social accounts come together in one process.

The DHD Studio price already includes the multiplatform ALGORITHM subscription, valued separately at $100 per month.

Create content and manage its distribution from one system.

REAL ALGORITHM AGENT INTERFACE

Pipeline · connected accounts · publications · statistics

PRODUCTION + PLANNING + PUBLISHING

DHD STUDIO

More content. Fewer shooting days.

Traditional video production requires preparing a set, cameras, lighting, repeated takes, and editing.

DHD Studio changes this process: your digital actor is created once and then used for new video projects.

You reduce the need for regular shoots while keeping the ability to maintain a constant on-screen presence.

Standard AI generation or your own digital actor?

When generating video from text or a reference, each new clip may require separate frame synthesis.
This creates a risk of changes to the face, clothing, tattoos, and other distinctive details.
DHD Studio is built around a permanent 3D actor: its appearance stays the same while scenes, animations, voice, and angles change.
Instead of constantly recreating the character, you reuse a digital asset.

Standard AI generation

- New video synthesis every time
- Details may change
- Clips must be re-prepared
- Separate creation process

DHD Studio

- Character reuse
- Persistent 3D identity
- Shared scenes and animations
- Integration with STAS and ALGORITHM

DHD STUDIO

Your time is for business. Your digital actor is for content.

You no longer need to get in front of the camera every day, hunt for ideas, write dozens of prompts yourself, and constantly regenerate videos.

You set the direction, review the content plan, and approve scripts.

Everything else, from preparing materials, directing, and production to scheduling publications, becomes part of an automated process.

YOU APPROVE THE IDEAS. YOUR STUDIO HANDLES PRODUCTION.

Several cutting-edge technologies. One personal studio.

DHD Studio combines the capabilities of professional 3D modeling, Unreal Engine, MetaHuman, artificial intelligence, speech synthesis, facial animation, and automated video production.

Each technology solves its own task. Together they form a single process for creating and using a digital actor.

Digital cinema technologies become a tool for growing your personal brand.

— DHD STUDIO

Your digital actor: a new chapter of your personal brand.

Create your own digital version.

Choose topics, looks, and scenes. Manage scripts. Use your digital actor for regular expert, advertising, and personal content.

One personal digital actor,
a complete content production system.

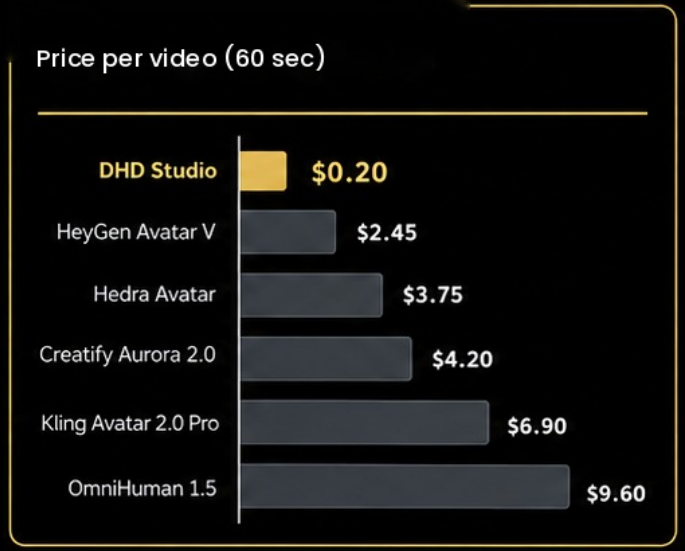

DHD STUDIO BY ALGORITHM

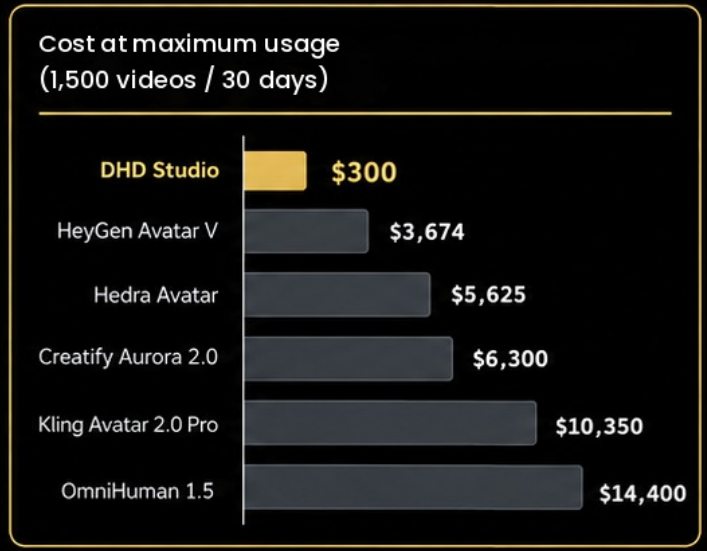

DHD STUDIO

Professional content at scale, on a fixed subscription.

At maximum usage, that's up to 1,500 minutes of video content in 30 days.

- Up to **50** videos per day
- **1 500** videos / 30 days
- **$0.20** per video

≈ **12x** cheaper than HeyGen

≈ **48x** cheaper than OmniHuman

D-ID V4 Expressive and Synthesia Express-2 use custom enterprise terms, so they are not included in the charts.

1 video = 60 seconds. 1,500 videos = 50 videos per day × 30 days. Comparison based on public pricing / API rates.
Up to 50 videos per day is the plan's target capacity. Actual publications depend on the limits of connected platforms.

From a digital twin to your own autonomous media studio.

DHD Studio, STAS AI Director, and ALGORITHM AGENT come together in a single digital ecosystem.

Creating the actor. Preparing the content plan.
Producing videos. Approving materials.
Managing publications.

One ecosystem instead of many scattered tools.

The multiplatform ALGORITHM subscription is included in the DHD Studio package.

DHD STUDIO BY ALGORITHM

YOU CREATE YOURSELF ONCE.

YOUR DIGITAL STUDIO CREATES CONTENT AGAIN AND AGAIN.

Your face. Your voice. Your style. Your digital media ecosystem.

DHD STUDIO — BY ALGORITHM TECHNOLOGY
